

Smarko

The **Smarko** collection is a multinorm fabric made with sustainable fibers.

In this development, we have focused our attention on Tencel™ and organic cotton fibers, both recognized for their low environmental impact.

Thanks to their low CO2 emissions during the production process, we have succeeded in creating a fabric collection capable of reducing the carbon footprint by up to 25%.

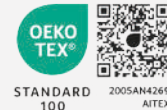

In addition to its sustainable production process, these fibers stand out for their comfort and versatility — they are soft to the touch, highly breathable, and absorbent, making them an excellent choice for protective garments.

Smarko is the sustainable version of our renowned Marko fabric, designed to reduce Marina Textil's environmental impact without compromising its technical properties, thus ensuring the protection and well-being of people working in various industrial sectors.

Smarko is certified with European standards of protective fabrics

TOGETHER WE MAKE IT POSSIBLE

At **Marina Textil**, we are committed to sustainability and the environment, integrating new practices into our production process to include sustainable measures. We implement renewable energy, promote material recycling, and develop upcycling projects to minimize waste. We hold certifications that validate our efforts to reduce our carbon footprint and continuously work towards our sustainability goals, ensuring a greener and more responsible future for the textile industry.

Maximizing Resources

We create product lines from production waste, providing the materials with a second life.

Process Optimization

We optimize processes by using renewable energies, sustainable materials, and promoting more efficient manufacturing practices.

Revolutionizing Our Facilities for a Better Future

We have renewed our facilities to maximize natural light, reducing energy consumption and creating healthier environments for our employees.

Reducing Our Carbon Footprint

We prioritize and limit travel to only the most necessary, significantly reducing our CO₂ emissions.

Clean Energy for a Greener World

With our solar panels, we generate 20% of the energy we use, reducing our dependence on non-renewable sources.

A Commitment to All

We promote the importance of recycling and being sustainable among our employees, suppliers, and customers because we believe that together, we can make a difference.
